

INTEGRATED SILICON SOLUTION, INC.

Subject: ISSI's Production Status after the Earthquake in Japan

This letter is to inform our customers of the production status of ISSI after the unfortunate earthquake that recently hit Japan. ISSI's manufacturing was not affected by the earthquake in Japan as all the fabs ISSI uses for the manufacturing of our memory products are located in Taiwan, China, USA, Singapore and Korea. Also, none of our assembly and test is done in Japan.

As such we have no interruption in wafer starts or wafer delivery with any of the fabs we use to manufacture our products. The same is true for assembly and test. We are closely monitoring the availability of raw materials. As of today, ISSI is not impacted by shortages of raw materials, and we do not anticipate this to be an issue for ISSI going forward.

ISSI is in an excellent position to support our customers' on-going requirements worldwide, and, if additional support is needed by our customers to cover shortages from other suppliers, then ISSI can step in to help.

I will update ISSI's production status if it should change in anyway. Until then, please continue to use ISSI in your applications without concern of supply constraints from ISSI as a result of the earthquake.

Our sympathy goes out to the people of Japan who have had to endure a natural disaster of such tremendous proportion. We wish them success in their recovery and re-building efforts.

Thank you for your continued support of ISSI.

Regards,

Sanjiv Asthana
